

# Reproducible Research for OMNeT++ Based on Python and Pweave

*Kyeong Soo (Joseph) Kim*

*Department of Electrical and Electronic Engineering*

*Xi'an Jiaotong-Liverpool University*

*07 September 2017*

# Outline

- Reproducible Research
- Python and Pweave
- Reproducible Research for OMNeT++
- Example: OMNeT++ FIFO Simulation

# Reproducible Research

# Reproducible Research

- Reproducible research is a key to any scientific method and ensures repeating an experiment and the results of its analysis in any place with any person.
- A study can be truly reproducible when it satisfies at least the following three criteria:
  - All experimental methods are fully reported.
  - All data and files used for the analysis are (publicly) available.
  - The process of analyzing raw data is well reported and preserved.
- Reproducible research is to ensure
  - Same data + Same script = Same results

# Why Do We Need Reproducible Research: Two Examples

- LIGO - Gravitational Wave Detection
- Schön scandal - Molecular Computing

# LIGO - Gravitational Wave Detection

- The [Laser Interferometer Gravitational-Wave Observatory \(LIGO\)](#) is a large-scale physics experiment and observatory to detect cosmic gravitational waves.
  - The detection of gravitational wave was reported in *Physical Review Letters* in Feb. 2016, together with [ipython notebook](#) with analysis code and data.

```
In [9]: # We need to suppress the high frequencies with some bandpassing:
bb, ab = butter(4, [20.*2./fs, 300.*2./fs], btype='band')
strain_H1_whitenbp = filtfilt(bb, ab, strain_H1_whiten)
strain_L1_whitenbp = filtfilt(bb, ab, strain_L1_whiten)
NR_H1_whitenbp = filtfilt(bb, ab, NR_H1_whiten)

# plot the data after whitening:
# first, shift L1 by 7 ms, and invert. See the GW150914 detection paper
strain_L1_shift = -np.roll(strain_L1_whitenbp, int(0.007*fs))

plt.figure()
plt.plot(time-tevent, strain_H1_whitenbp, 'r', label='H1 strain')
plt.plot(time-tevent, strain_L1_shift, 'g', label='L1 strain')
plt.plot(NRtime+0.002, NR_H1_whitenbp, 'k', label='matched NR waveform')
plt.xlim([-0.1, 0.05])
plt.ylim([-4, 4])
plt.xlabel('time (s) since '+str(tevent))
plt.ylabel('whitened strain')
plt.legend(loc='lower left')
plt.title('Advanced LIGO WHITENED strain data near GW150914')
plt.savefig('GW150914_strain_whitened.png')
```

# Schön Scandal - Molecular Computing

- No records found for his groundbreaking experimental results, including lab notebook, experimental samples and data, hard disk drives.
- During the investigation, he kept repeating ***"I clearly observed them in the Lab but ..."***

## Bell Labs launches inquiry into allegations of data duplication

**Goodfellow, Washington**  
One of the most widely cited scientific results in the world, a paper published in 1993 by two researchers at Bell Labs, has been found to contain significant duplication of data. The paper, which was published in the journal *Science*, has been widely cited in the scientific community. The researchers, who were working on the development of a new type of transistor, had been found to have duplicated data from a previous paper. The Bell Labs investigation is still ongoing.

## Misconduct finding at Bell Labs shakes physics community

**Goodfellow, Washington**  
Physicists are coming to terms this week with one of the most audacious scientific frauds ever uncovered. The results of an investigation into the work of two researchers at Bell Labs, who had been found to have duplicated data from a previous paper, has been published in the journal *Science*. The researchers, who were working on the development of a new type of transistor, had been found to have duplicated data from a previous paper. The Bell Labs investigation is still ongoing.

Jan Hendrik Schön, head of the Bell Labs nanotechnology group, is shown in a photograph. He is a man with short dark hair, wearing a dark shirt, looking directly at the camera.

## Bell Labs inquiry spreads to superconductors

**Goodfellow, Washington**  
As investigations into the data duplication at Bell Labs spread, the inquiry has now spread to other areas of the laboratory. The results of an investigation into the work of two researchers at Bell Labs, who had been found to have duplicated data from a previous paper, has been published in the journal *Science*. The researchers, who were working on the development of a new type of transistor, had been found to have duplicated data from a previous paper. The Bell Labs investigation is still ongoing.

The graphs show data duplication in the Schön paper. The top graph shows a plot of current versus voltage, and the bottom graph shows a plot of resistance versus temperature. Both graphs show significant duplication of data from a previous paper.

### commentary

## Is a bell tolling for Bell Labs?

It would be wise of Bell Labs to help others reproduce their scientists' results.

**Paul Grant**  
Dark of his rapidly begins to gather over the exceptional finding of superconductivity at 1.7 K reported last year by research team and co-laborer at Bell Labs, Jan Hendrik Schön, a physicist at the University of Konstanz, Germany, has published a paper in the journal *Science* reporting on his experiments with a superconductor. The paper, which was published in the journal *Science*, has been widely cited in the scientific community. The researchers, who were working on the development of a new type of transistor, had been found to have duplicated data from a previous paper. The Bell Labs investigation is still ongoing.

The photo shows two researchers in a laboratory setting. They are standing next to each other, looking at something off-camera. The man on the left is wearing a dark shirt, and the woman on the right is wearing a light-colored shirt.

# Python and Pweave

# R/Sweave to Python/Pweave

- Until recently, R was the language of choice for statistical processing and data analysis.
  - Still, R has the largest code base for a wide variety of statistical and graphical techniques.
- Like *ipython* (now *jupyter*), R provides a nice tool called *Sweave* (now replaced by *knitr*) to weave documentation and the results of the execution of R code chunks into one source file for integrated documentation.
- Python — one of the most popular languages in scientific computing, including artificial intelligence & machine learning — recently takes over R in statistical processing and data analysis as well.
  - Thanks to [\*pandas\*](#) implementing DataFrame object similar to R and [\*Pweave\*](#), python can replace R for most statistical and data analysis tasks, while retaining its many advantages over R (i.e., fully-featured programming language with easy syntax and higher speed).

```

print(.tabledf,
      tabular.environment="longtable", caption.placement="top",
      include.rownames=FALSE, floating=FALSE, NA.string="NA")
@

```

Pweave source file (“\*.Plw”)

- Mix of documentation (e.g., LaTeX) and code Chunks (e.g., Python)

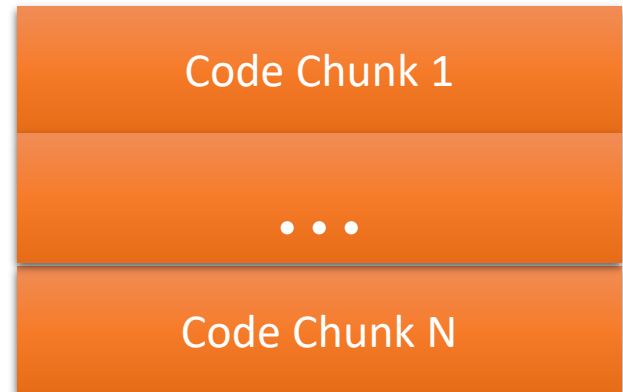

Weaving (*pweave*)

A documentation source file

- e.g., “\*.tex” for LaTeX

Tangling (*ptangle*)

A program source file for separate execution and debugging

- e.g., “\*.py” for Python

# Weaving Example: Automatic Table Generation

The following Python code chunk can automatically generate a long table over multiple pages from a pandas dataframe<sup>1</sup>:

```
<<echo=False,results='raw'>> =
import numpy as np
df = fifo_df.filter(regex="^(?! (r|R)un).* $" ) # exclude columns starting with run/Run
print(df.to_latex(longtable=True))
@
```

Weaving & LaTeXing

The following Python code chunk can automatically generate a long table over multiple pages from a pandas dataframe<sup>1</sup>:

```
<<echo=False,results='raw'>> =
import numpy as np
df = fifo_df.filter(regex="^(?! (r|R)un).* $" ) # exclude columns starting with run/Run
print(df.to_latex(longtable=True))
@
```

Continued on next page

<sup>1</sup>Note that a space is inserted between '»' and '=' to prevent Pweave from weaving the code; it seems that there is no way to escape Pweave chunk code markers.

# Reproducible Research for OMNeT++

# How to Deal with Simulation Input Files

- Include them the document.
  - OK for small simulations
- Use a snapshot of the whole configurations.
  - e.g., git commit hashes

```
//  
// This file is part of an OMNeT++/OMNEST simulation example.

```

Remove README.rst; only the markdown version of README

```
commit 8765336f9e2f5543fea8c4f37a0cf894da7f4c8e  
Author: Kyeong Soo (Joseph) Kim <kyeongsoo.kim@gmail.com>  
Date: Sun Oct 2 17:32:02 2016 +0000
```

Change simulation time.

Listing 1: 'FifoNet.ned' for FIFO sample model.

# How to Guarantee Match Between Input Files and Output Data

- Online generation of results
  - Include simulation execution code within a document
    - Refer to the provided sample Pweave file.
  - OK for smaller simulations, but not for larger simulations.
- Use a snapshot of the whole configurations and data
  - e.g., git commit hashes
  - Version controlling output data together with source code and input configuration files, however, may greatly increase the size of a repository.

# How to Present and Analyze Output Data

- Unstacking of stacked DataFrame
  - Use *pivot* function (see the example shown here).
- Aggregated processing of measurement data over independent variables
  - Use *pivot\_table* function.
  - Useful for the calculation of mean and confidence intervals over multiple iterations.
- Online calculation of confidence intervals
  - Confidence intervals (CIs) can be calculated by assigning a custom function for CI to *aggfunc* parameter of *pivot\_table* function.
  - Now pandas support error bars in its own plot functions.
